POS INTERFACE SYSTEM

Includes:

- POS Interface
- Dipole Antenna
- Mini USB Cable
- Power Supply

The POS interface is your passport to communicating between your POS and your LED gas price changers. Once installed, please contact your POS representative to have them easily unlock your communication port on your POS system

POS INTERFACE

Please connect the coaxial cable to your POS interface. Place the antenna as close as possible to the open window facing the LED gas price changers

DIPOLE ANTENNA

110 to 5V 3 amp power supply adapter. Please note that this 3 amp power supply is required to power your device. Please do not use other power supplies.

POWER SUPPLY

Common USB to mini USB cable. This connects the POS interface to the supplied power supply

MINI USB CABLE

This product is not included and should come with your POS system. Please contact your POS sales rep for a new cable or it can be purchased separately from online sources. The DB9 (9 pin connection) connects to the POS interface. The CAT5 (ethernet) connects to your POS controller

DB9 TO CAT5 CABLE ADAPTER
